In this one hour video I will tell you what to look for when buying thinning shears, explaining the different teeth configuration and how each will affect your end results. When used properly thinning shears can be your "great eraser" as well as the ultimate transition tool to naturally blend lines from clipperwork into longer coat. I will also demonstrate several breeds with different coat types and walk you through thinning techniques such as blending, lift layering, bulk thinning, softening as well as many other techniques that will significantly improve your finished product.
